R Markdown Document with dir()

This is an R Markdown (http://rmarkdown.rstudio.com) Document obtaining "dir()" and tabling the first character.

NOTE: The "editor toolbar" (on the line below the filename) contains "Preview" in an "R Markdown Notebook" and "Knit" in an "R Markdown Document".

First get the directory:

```
(Dir <- dir())
```

```
##  [1] "cor_logger_tuner.png" "cor_logger_tuner.svg" "logR.Rmd"
##  [4] "logR.Rproj"           "logR2018-09-24.Rmd"   "logR2018-09-25.Rmd"
##  [7] "logR2018-09-25b.Rmd"  "logR2018-09-27.Rmd"   "logR2018-09-27b.Rmd"
## [10] "logR2018-09-29.Rmd"   "readMP3.xls"          "RmdDocDir.html"
## [13] "RmdDocDir.Rmd"        "RNotebookDir.nb.html" "RNotebookDir.Rmd"
## [16] "tst.html"             "tst.nb.html"          "tst.Rmd"
```

Now table the first character:

```
table(substring(Dir, 1, 1))
```

```
##
## c l r R t
## 2 8 1 4 3
```
